REPORTS ON PROGRESS IN PHYSICS

Volumes 38-40

Cumulative author index

Cumulative classified subject index

The Institute of Physics

Cumulative author index, volumes 36–40

	Vol	Page
ACHESON D J and HIDE R: Hydromagnetics of rotating fluids	36	159
ALLEN G and HIGGINS J S: Physico-chemical aspects of neutron studies of molecular motion	36	1073
ALLEN J E and PHELPS A D R: Waves and microinstabilities in plasmas—linear effects	40	1305
ASHTEKAR A and GEROCH R: Quantum theory of gravitation	37	1211
AURENCHE J P and PATON J E: High-energy hadron collisions: a point of view	39	175
BAIRD K M and HANES G R: Stabilization of wavelengths from gas lasers	37	927
BARNETT T P and KENYON K E: Recent advances in the study of wind waves	38	667
BARRETT R C: Nuclear charge distributions	37	1
BASSANI F, IADONISI G and PREZIOSI B: Electronic impurity levels in semiconductors	37	1099
BASTIN J A: The lunar surface layer	36	289
BERRY H G: Beam–foil spectroscopy	40	155
BEYNON T D: The nuclear physics of fast reactors	37	951
BIRKS J B: Excimers	38	903
BODIN H A B and KEEN B E: Experimental studies of plasma confinement in toroidal systems	40	1415
BOWCOCK J E and BURKHARDT H: Principles and problems of phase-shift analysis	38	1099
BRICE J C: The growth of insulating crystals	40	567
BRIGGS J S: The excitation of inner shells in slow atomic collisions	39	217
BURKHARDT H: *see* BOWCOCK J E		
BURSTEIN E: *see* MILLS D L		
BUSCHOW K H J: Intermetallic compounds of rare-earth and 3d transition metals	40	1179
BUTTER M B N: Acoustic domains	37	421
CAGNAC B: *see* GRYNBERG G		
CARDEN P O: An historical review of the development of high-field electromagnets, particularly with regard to the theory of mechanical strength and the limits of performance	39	1017
CARTWRIGHT D E: Oceanic tides	40	665
CHANDRASEKHAR S: Liquid crystals	39	613
CHILDS T H C and ROWE G W: Physics in metal cutting	36	223
CODLING K: Applications of synchrotron radiation	36	541
COLLES M J and PIDGEON C R: Tunable lasers	38	329
COMPTON J P: *see* QUINN T J		
COPLEY J R D and LOVESEY S W: The dynamic properties of monatomic liquids	38	461
COWLEY R A: *see* WOODS A D B		
COX J P: Pulsating stars	37	563
CYROT M: Ginzburg–Landau theory for semiconductors	36	103
DALGARNO A and BLACK J H: Molecule formation in the interstellar gas	39	573
DAVIES D: Seismology with large arrays	36	1233
DELBOURGO R: How to deal with infinite integrals in quantum field theory	39	345
DOLDER K T and PEART B: Collisions between electrons and ions	39	693
DONNACHIE A: Partial wave analysis and baryon resonances	36	695
EGGEN O J, FREEMAN K C and RODGERS A W: Structure of the Galaxy	36	625
FENEUILLE S: Interaction of laser radiation with free atoms	40	1257
FITCH F J, FORSTER S C and MILLER J A: Geological time scale	37	1433
FORSTER S C: *see* FITCH F J		
FRANKLIN R N: Microinstabilities in plasmas—non-linear effects	40	1369
FRANKS A: *see* PALMER E W		
FREEMAN K C: *see* EGGEN O J		
GALE B: *see* PALMER E W		
GANTMAKHER V F: The experimental study of electron–phonon scattering in metals	37	317

	Vol	Page
GARSTANG R H: Atoms in high magnetic fields	40	105
GEHRING G A and GEHRING K A: Cooperative Jahn–Teller effects	38	1
GEHRING K A: *see* GEHRING G A		
GERJUOY E and THOMAS B K: Applications of the Glauber approximation to atomic collisions	37	1345
GEROCH R: *see* ASHTEKAR A		
GIBSON W M: The use of storage rings in high-energy physics	36	921
GILL J C: The establishment of thermal equilibrium in paramagnetic crystals	38	91
GOLDE M F and THRUSH B A: Afterglows	36	1285
GOLDHABER A S and SMITH J: Hypothetical particles	38	731
GRANT I S: The fission process	39	955
GREEN A M: Nucleon resonances in nuclei	39	1109
GREEN T S: Intense ion beams	37	1257
GREINER W: *see* REINHARDT J		
GREY MORGAN C: Laser-induced breakdown in gases	38	621
GRÜNER G and ZAWADOWSKI A: Magnetic impurities in non-magnetic metals	37	1497
GRYNBERG G and CAGNAC B: Doppler-free multiphotonic spectroscopy	40	791
TER HAAR D and PELLING M A: Interstellar hydroxyl and water masers and formaldehyde masers and dasers	37	481
HADLEY D W and WARD I M: Anisotropic and non-linear viscoelastic behaviour in polymers	38	1143
HANES G R: *see* BAIRD K M		
HARPER P G, HODBY J W and STRADLING R A: Electrons and optic phonons in solids—the effects of longitudinal optical lattice vibrations on the electronic excitations of solids	36	1
HIBBERT A: Developments in atomic structure calculations	38	1217
HIDE R: *see* ACHESON D J		
HIGGINS J S: *see* ALLEN G		
HODBY J W: *see* HARPER P G		
HODGSON P E: Nucleon removal and rearrangement energies	38	847
HOLMES-SEIDLE A G: Radiation sensitivity and amorphous materials—present and future	37	699
HOUGHTON J T and TAYLOR F W: Remote sounding from artificial satellites and space probes of the atmosphere of the Earth and the planets	36	827
HUISKAMP W J and LOUNASMAA O V: Ultralow temperatures—how and why	36	423
HULME K F: Non-linear optical crystals and their applications	36	497
HUNT R W G: Colour reproduction by photography	40	1071
HUTLEY M C: *see* PALMER E W		
HUTTON V R S: The electrical conductivity of the Earth and planets	39	487
IADONISI G: *see* BASSANI F		
IMHOF R E and READ F H: Measurement of lifetimes of atoms, molecules and ions	40	1
IRVINE J M: Pion condensation and other abnormal states of matter	38	1385
JACKSON D F: Nuclear sizes and the optical model	37	55
JACROT B: The study of biological structures by neutron diffraction	39	911
JONES H: Splat cooling and metastable phases	36	1425
JOYCE B A: The growth and structure of semiconducting thin films	37	363
KALMUS G E: Recent advances in bubble chamber physics	36	961
KEEN B E: *see* BODIN H A B		
KENYON K E: *see* BARNETT T D		
KILLINGBECK J: Quantum-mechanical perturbation theory	40	963
KUCHOWICZ B: Neutrinos from the Sun	39	291
KUGEL H W and MURNICK D E: The Lamb shift in hydrogenic ions	40	297
LAWLESS K R: The oxidation of metals	37	231
LEFORT M: Nuclear fusion between heavy ions	39	129
LESLIE D C: Review of developments in turbulence theory	36	1365
LEVINSON Y B and RASHBA E I: Electron–phonon and exciton–phonon bound states	36	1499

Cumulative classified subject index, volumes 36–40

The 1977 subject index is based on the revised Physics Abstracts classification scheme.

00.00 General

	Vol	Page
Electron lenses: T Mulvey and M J Wallington	36	347
Ultralow temperatures—how and why: W J Huiskamp and O V Lounasmaa	36	423
Applications of synchrotron radiation: K Codling	36	541
Recent advances in bubble chamber physics: G E Kalmus	36	961
The foundations of thermometry: T J Quinn and J P Compton	38	151
Diffraction gratings: E W Palmer, M C Hutley, A Franks, J F Verrill and B Gale	38	975
An historical review of the development of high-field electromagnets, particularly with regard to the theory of mechanical strength and the limits of performance: P O Carden	39	1017
Standards of length and time: J Terrien	39	1067
Invariants and stability in classical mechanics: K J Whiteman	40	1033
Colour reproduction by photography: R W G Hunt	40	1071

10.00 The physics of elementary particles and fields

Partial wave analysis and baryon resonances: A Donnachie	36	695
Duality: R J N Phillips and D P Roy	37	1035
Quantum theory of gravitation: A Ashtekar and R Geroch	37	1211
Hypothetical particles: A S Goldhaber and J Smith	38	731
Outline of axiomatic relativistic quantum field theory: R F Streater	38	771
Principles and problems in phase-shift analysis: J E Bowcock and H Burkhardt	38	1099
High-energy hadron collisions: a point of view: J P Aurenche and J E Paton	39	175
How to deal with infinite integrals in quantum field theory: R Delbourgo	39	345
Quantum electrodynamics of strong fields: J Reinhardt and W Greiner	40	219
Inelastic lepton–nucleon scattering: D H Perkins	40	409
Quantization of non-linear systems: A Neveu	40	709

20.00 Nuclear physics

The use of storage rings in high-energy physics: W M Gibson	36	921
Recent advances in bubble chamber physics: G E Kalmus	36	961
Nuclear charge distributions: R C Barrett	37	1
Nuclear sizes and the optical model: D F Jackson	37	5
The nuclear physics of fast reactors: T D Beynon	37	951
Nucleon removal and rearrangement energies: P E Hodgson	38	847
Pion condensation and other abnormal states of matter: J M Irvine	38	1385
Nuclear fusion between heavy ions: M Lefort	39	129
Hyperons in nuclei: B Povh	39	823
The fission process: I S Grant	39	955
Nucleon resonances in nuclei: A M Green	39	1109
Heavy-ion transfer reactions: W R Phillips	40	345
The shape of nuclei: R S Mackintosh	40	731
Three-body systems in nuclear physics: A C Phillips	40	905

30.00 Atomic and molecular physics

	Vol	Page
Physico-chemical aspects of neutron studies of molecular motion: G Allen and J S Higgins	36	1073
Applications of the Glauber approximation to atomic collisions: E Gerjuoy and B K Thomas	37	1345
Inelastic laser light scattering from synthetic and biological polymers: I W Shepherd	38	565
Excimers: J B Birks	38	903
Developments in atomic structure calculations: A Hibbert	38	1217
The excitation of inner shells in slow atomic collisions: J S Briggs	39	217
Collisions between electrons and ions: K T Dolder and B Peart	39	693
Measurement of lifetimes of atoms, molecules and ions: R E Imhof and F H Read	40	1
Atoms in high magnetic fields: R H Garstang	40	105
Beam–foil spectroscopy: H G Berry	40	155
The Lamb shift in hydrogenic ions: H W Kugel and D E Murnick	40	297
Doppler-free multiphotonic spectroscopy: G Grynberg and B Cagnac	40	791
Recent progress in atomic collisions theory: B L Moiseiwitsch	40	843
Quantum-mechanical perturbation theory: J Killingbeck	40	963
Interaction of laser radiation with free atoms: S Feneuille	40	1257

40.00 Classical areas of phenomenology

Hydromagnetics of rotating fluids: D J Acheson and R Hide	36	159
Electron lenses: T Mulvey and M J Wallington	36	347
Non-linear optical crystals and their applications: K F Hulme	36	497
The elasticity and related properties of rubbers: L R G Treloar	36	755
Review of developments in turbulence theory: D C Leslie	36	1365
Optical coherence theory: G J Troup and R G Turner	37	771
Stabilization of wavelengths from gas lasers: K M Baird and G R Hanes	37	927
Intense ion beams: T S Green	37	1257
Tunable lasers: M J Colles and C R Pidgeon	38	329
Diffraction gratings: E W Palmer, M C Hutley, A Franks, J F Verrill and B Gale	38	975
Absorber theory of radiation: D T Pegg	38	1339

50.00 Fluids, plasmas and electric discharges

Hydromagnetics of rotating fluids: D J Acheson and R Hide	36	159
Afterglows: M F Golde and B A Thrush	36	1285
Review of developments in turbulence theory: D C Leslie	36	1365
Laser-induced breakdown of gases: C Grey Morgan	38	621
Convection: R H Rogers	39	1
Waves and microinstabilities in plasmas—linear effects: J E Allen and A D R Phelps	40	1305
Microinstabilities in plasmas—non-linear effects: R N Franklin	40	1369
Experimental studies of plasma confinement in toroidal systems: H A B Bodin and B E Keen	40	1415

60.00 Condensed matter: structure, thermal and mechanical properties

Structure and excitations of liquid helium: A D B Woods and R A Cowley	36	1135
Splat cooling and metastable phases: H Jones	36	1425

	Vol	Page
Electron–phonon and exciton–phonon bound states: Y B LEVINSON and E I RASHBA	36	1499
The experimental study of electron–phonon scattering in metals: V F GANTMAKHER	37	317
The growth and structure of semiconducting thin films: B A JOYCE	37	363
Radiation sensitivity and amorphous materials—present and future: A G HOLMES-SIEDLE	37	699
The dynamic properties of monatomic liquids: J R D COPLEY and S W LOVESEY	38	461
Anisotropic and non-linear viscoelastic behaviour in solid polymers: D W HADLEY and I M WARD	38	1143
Liquid crystals: S CHANDRASEKHAR	39	613
Intermetallic compounds of rare-earth and 3d transition metals: K H J BUSCHOW	40	1179

70.00 Condensed matter: electronic structure, electrical, magnetic and optical properties

Electrons and optic phonons in solids—the effects of longitudinal optical lattice vibrations on the electronic excitations of solids: P G HARPER, J W HODBY and R A STRADLING	36	1
Ginzburg–Landau theory for superconductors: M CYROT	36	103
Non-linear optical crystals and their applications: K F HULME	36	497
Formation of localized moments in metals: experimental bulk properties: C RIZZUTO	37	147
The growth and structure of semiconducting thin films: B A JOYCE	37	363
Acoustic domains: M B N BUTLER	37	421
Polaritons: the electromagnetic modes of media: D L MILLS and E BURSTEIN	37	817
Electronic impurity levels in semiconductors: F BASSANI, G IADONISI and B PREZIOSI	37	1099
Magnetic impurities in non-magnetic metals: G GRÜNER and A ZAWADOWSKI	37	1497
Cooperative Jahn–Teller effects: G A GEHRING and K A GEHRING	38	1
The establishment of thermal equilibrium in paramagnetic crystals: J C GILL	38	91
The behaviour of surfaces under ion bombardment: G M MCCRACKEN	38	241
Fluctuations near superconducting phase transitions: W J SKOCPOL and M TINKHAM	38	1049
The Josephson effects in weakly coupled superconductors: J R WALDRAM	39	751
Fermi surface studies of pure crystalline materials: R C YOUNG	40	1123
Intermetallic compounds of rare-earth and 3d transition metals: K H J BUSCHOW	40	1179

80.00 Cross-disciplinary physics and related areas of science and technology

Physics in metal cutting: T H C CHILDS and G W ROWE	36	223
The oxidation of metals: K R LAWLESS	37	231
Physical properties of blood and their influence on blood-flow measurement: J P WOODCOCK	39	65
The oxidation of alloys: G R WALLWORK	39	401
The study of biological structures by neutron scattering from solution: B JACROT	39	911
The growth of insulating crystals: J C BRICE	40	567
The organization of human vision for pattern detection and recognition: K H RUDDOCK	40	603

90.00 Geophysics, astronomy and astrophysics

The lunar surface layer: J A BASTIN	36	289

	Vol	Page
Structure of the Galaxy: O J Eggen, K C Freeman and A W Rodgers	36	625
Remote sounding from artificial satellites and space probes of the atmospheres of the Earth and the planets: J T Houghton and F W Taylor	36	827
Seismology with large arrays: D Davies	36	1233
Optical properties of the ocean: J Williams	36	1567
Interstellar hydroxyl and water masers and formaldehyde masers and dasars: D ter Haar and M A Pelling	37	481
Pulsating stars: J P Cox	37	563
Geological time scale: F J Fitch, S C Forster and J A Miller	37	1433
Recent advances in the study of wind waves: T P Barnett and K E Kenyon	38	667
Neutrinos from the Sun: B Kuchowicz	39	291
The electrical conductivity of the Earth and planets: V R S Hutton	39	487
Molecule formation in the interstellar gas: A Dalgarno and J H Black	39	573
Magnetic minerals in the crust of the Earth: W O'Reilly	39	857
Interstellar radio spectrum lines: W B Somerville	40	483
Oceanic tides: D E Cartwright	40	665
